

Movie Backend

Completed Tasks:

- Implemented JWT authentication middleware for signup and login.
- Wrote a controller called User.js to handle user-related functionality.
- Applied API and added Swagger implementation for API documentation and testing.
- Implemented two functions to enable users to follow a selectable movie.
- Used Workbench tool to implement the database.
- Implemented routes.

Incomplete Tasks:

- Could not implement favourite catching properly due to issues with installing the Memcached server and lack of prior knowledge.
- Not familiar with Slugs and Database Migrations.

Design Pattern:

- Used the Modal View Controller pattern.
